

John Fitzgerald

Greater Seattle Area — (425) 583-8309 — john.fitzgerald.dev@gmail.com — github.com/wobey

Senior Software Engineer with 7+ years of experience building data pipelines, automation systems, and internal tooling for large-scale platforms. Proficient in SQL, Python, and Google Apps Script, with a focus on improving data quality, operational efficiency, and scalable backend systems.

Skills

Languages: C++, C#, Python, Java, SQL, JavaScript, HTML5, WebGL, Assembly

Platforms: Windows, Linux, Android, iOS

Additional: Visual Studio, PyCharm, Valgrind, Git, Unity3D, Tableau, Photoshop, Improv Comedy

Employment

Senior Software Engineer

Remote (Austin, TX)

Jan 2025 — present

GlobalLogic

- Collaborated with stakeholders to scale and refactor Unified Reporting infrastructure (**SQL, Plx, Python, Google Apps Script**), improving data normalization, integrity, and reliability for cross-team analytics and daily business decision-making.
- Designed and built an internal bug management system (**Google Apps Script + Google Sheets**) that automated **QC logging**, validation, and reporting, saving ~1 hour per day per team member, and improving data accuracy.
- Developed **Plx workflows** to track GlobalLogic Operations team data (rosters, overtime, capacity), enabling more accurate resource planning and operational visibility for leadership.
- Created a centralized metadata tracking system (**SQL, Plx dashboards**) for all internal data assets (scripts, tables, dashboards, data sites), improving discoverability, reducing duplication, and standardizing data ownership across our team.
- Mentored team members on data tooling, automation, and best practices, improving team efficiency, and enabling broader adoption of internal systems.

Senior Software Engineer

Bothell, WA

Feb 2019 — Jan 2025

GlobalLogic

- Designed and developed internal tooling (**Python, SQL, JavaScript, Google Apps Script**) to automate partner onboarding workflows, *reducing manual agent effort by 2–5+ hours per week per agent*.
- Built and maintained scalable dashboards and data pipelines (**Plx, Reportly**) used across teams to track partner lifecycle, QA validation, and operational metrics, improving visibility and decision-making.
- Developed workflow automation and validation systems (**QC dashboards, lifecycle tracking**) that increased partner onboarding throughput, and reduced process errors.
- Led migration and consolidation of dashboarding infrastructure, ensuring data reliability and long-term maintainability across multiple teams.
- Partnered with Google stakeholders to translate ambiguous user requirements into scalable technical solutions, including automation, data aggregation, and reporting tools.
- Served as a key contributor to operational strategy, influencing process design, risk assessment, and workflow optimization across partner support systems.

Developer Support Specialist

Google via Artech Information Systems

Kirkland, WA

Jun 2018 — Feb 2019

Provide developer & partner solutions for the Reserve with Google platform (**SQL, Python, JS**).

- Ensure timely and reliable technical solutions to partners using the **Google Maps Booking API**.
- Develop workflows to quickly diagnose and reduce GMB API feed errors over **REST** and **RPC**.
- Onboard new partners and resolve technical needs and issues as the platform grows.

Software Engineering Intern

Adaptive Biotechnologies

Seattle, WA

Jun 2017 — Sept 2017

Worked in a bioinformatics team to develop **Python, SQL**, and **Tableau** projects using an Agile SDLC.

- Developed a Python changepoint detection system to visualize process deviations.
- Developed unit tests for pipeline changes while Adaptive became FDA compliant.
- Translated user stories into formal requirements documentation for a Tableau visual.

Game Developer

Diadem Studios

Everett, WA

Oct 2013 — Jan 2016

Developed **Unity3D** tools using **C#** for the design, dev, and sound teams in an Agile environment.

Outpost (tower defense game on PC)

- Developed an analytics framework to parse large data sets for online scoreboard and long-term design refinement (in combination with Unity Analytics engine and servers).

Blue Monarch (2.5D MOBA game on PC)

- Developed an XML serializer in C# to reduce the designers' time updating scenes by 50%.

Education	University of Washington Bothell (UWB)	Graduated Dec 2017
	B.S. in Computer Science and Software Engineering (CSSE)	
	• GPA 3.5 / 4.0 • Dean's List	Spring 2016 — Winter 2017
	Everett Community College (EVCC)	
	Transfer Student	
	• GPA 3.7 / 4.0	
Course Work	*Data Structures, Algorithms, & Discrete Math; *Analysis and Design; *Software Engineering; *2D Computer Graphics; *Game Design; *Database Systems; *Data Visualization; *Hardware and Computer Organization; *Business of Technology; *Computer Networking; *Operating Systems; *Web Scraping; *Scripting Languages	
Projects	<u>Web Scraper</u> [Python, SQL Server, AWS RDS, Azure, Tableau]	Oct 2017 — Present
	• Designed and developed a Reddit and weather web scraper to predict users' posting habits. • Created a Tableau visual to showcase and correlate each dataset from an Azure SQL Server. • Foundation for a future machine learning + language parsing project using these datasets.	
	File System [Java]	Mar 2017 — Jun 2017
	• Developed a Unix-like file system to format, open, read, write, seek, close, fsize, and del files.	
	FTP Client [C++]	Mar 2017 — Jun 2017
	• Developed an FTP-like client that handles open, cd, ls, get, put, close, quit, del, and syst.	
	<u>Movie Rental Storefront</u> [C++]	Sep 2016 — Dec 2016
	• Developed an automated storefront to catalog movies, customers, and their transactions. • Developed a templated hash table and binary search tree to efficiently insert/retrieve data.	
	<u>Interior Designer</u> [JavaScript, HTML5, WebGL]	Sep 2016 — Dec 2016
	• Developed a web tool allowing users to design a top-down perspective of their home. • Developed assets to be easily added, deleted, grouped, scaled, translated, and rotated.	
	Magic the Gathering Card Database [C#, SQL, Windows Forms]	Mar 2016 — Jun 2016
	• Designed SQL queries (buy, sell, trade, etc.) based on user requirements. • Developed an online storefront's front end UI to fetch and display relevant user data.
